Connect, Visualize, Control.
Secure OT that scales.

DATASHEET

TOSI INSIGHT

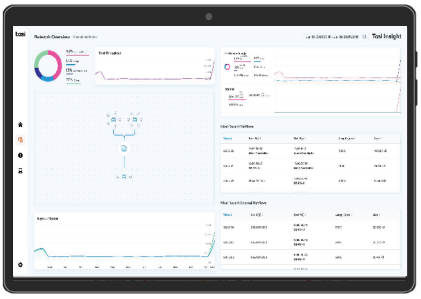
Your OT Just Got Smarter

Modern OT environments generate vast amounts of network, device, and operational data, but data alone does not provide understanding. While organizations may know what is connected, they often lack the visibility and context needed to identify unusual activity and operational risks across the environment. As a result, teams are forced into reactive operations, leading to slower response times, increased risk exposure, and reduced operational efficiency.

WHAT TOSI INSIGHT DOES

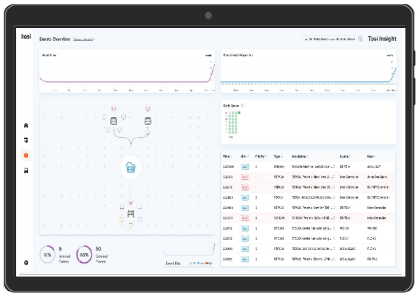
Tosi Insight extends Tosi Control by providing visibility into what is happening across your OT environment. It identifies communicating assets, highlights unusual activity, and uncovers operational risks that connectivity monitoring alone cannot detect. By transforming operational data into actionable intelligence, Tosi Insight helps teams understand why events are occurring, respond more quickly, reduce risk, and improve operational performance.

SEE TOSI INSIGHT IN ACTION



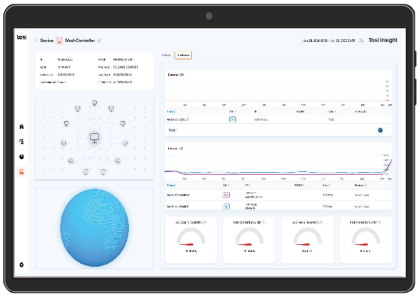
Network Intelligence

Identify abnormal traffic patterns and device anomalies instantly.



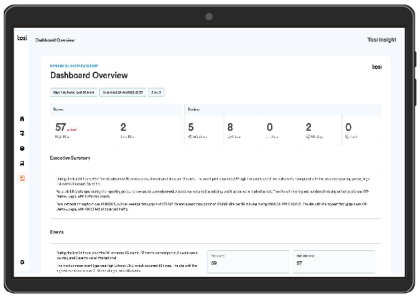
Risk Driven Alerts

Intelligent alerting that prioritizes real risk.



Hidden Risk Discovery

Uncover unknown assets, unexpected communications, and operational risks.



Insight Reporting

Transform OT activity into executive-ready reports, trends, and intelligent insights.

CORE CAPABILITIES

- **Instant Alerts & Notifications** - Proactively detect device issues and anomalous traffic patterns in real time.
- **Advanced Filtering & Noise Control** - Focus on the IPs, devices, and events that matter most.
- **Friendly Names & Custom Attributes** - Simplify device identification and organization across environments.
- **Enhanced Navigation & Drill-Down** - Transition effortlessly from overview dashboards to granular insights.
- **Traffic Analytics & Visualization** - Understand behavior, trends, and anomalies across your network.
- **Rich Tagging & Contextual Insights** - Add meaningful metadata to improve visibility and decision-making.
- **Device Metadata & Historical Context** - Track activity over time with timestamps and enriched device data.
- **Traffic Investigation Tools** - Correlate sources quickly to accelerate root cause analysis.
- **One-Click Exports** - Easily share reports and insights across teams.

SECURITY BUILT IN

Tosi Insight inherits the zero-trust architecture of the Tosi Platform. Access is governed through SSO integration with enterprise identity providers, with role-based permissions (Owner, Admin, Viewer) and the ability to restrict sensitive custom attributes to owners and admins only. All communication is encrypted end-to-end, and audit logs track every action for compliance.

WHAT CUSTOMERS SAY

> Tosi Insight identified an undocumented device in our OT environment and **enabled us to quickly investigate and understand the potential operational risk.**

CUSTOMER

BUSINESS OUTCOMES

- Reveal operational risks before they impact uptime.
- Reduce the time to investigate OT incidents Improve visibility across distributed OT environments.
- Reveal operational risks before they impact uptime.
- Give OT, operations, and security teams a shared operational view.
- Make faster, data-driven decisions across OT teams.
- Strengthen uptime and operational resilience.
- Shift from reactive firefighting to proactive management.
- Enable cross-team collaboration with shared insights.
- Scale OT visibility without adding complexity.
